Q: Objective-C Key-Value pair accessor I am working on a CoreData based application for iPhone. I want to add support for a Dictionary within the entity. I would like to be able to take advantage of Key-Value accessor methods to access the values in the dictionary. However, I have been unsuccessful. I have looked at: How to create an NSDictionary that only retains keys (sounds close)? NSMutableDictionary valueForKey However, I can't seem to get the compiler to accept the initializer used in the first link (and NSDictionary) as a valid initializer for NSDictionary. Am I using the wrong type in this case? Update: I have found another link which has a similar question, but the proposed solution doesn't appear to work. Creating a CoreData Entity for iOS which stores a dictionary Another approach is to
